Machine Learning Engineer

Experienced in end-to-end machine learning lifecycle management, including model development, deployment, and monitoring. Proficient in Python, SQL, and cloud technologies, with a strong focus on rigorous model evaluation and predictive modeling. Demonstrated ability to optimize data pipelines and automate workflows to improve efficiency and scalability. Skilled at delivering production-ready machine learning solutions with ownership and autonomy in fast-paced environments.

SKILLS

Programming Languages: Python, Rust, Typescript, SQL, R.

Machine Learning & AI: Machine Learning, Predictive Modeling, Model Evaluation, Model Benchmarking, Model Monitoring, Feature Engineering, Model Training, Generative AI.

Cloud & Infrastructure: AWS, Docker, Kubernetes, CI/CD.

Databases & APIs: PostgreSQL, GraphQL, REST APIs, FastAPI.

PROFESSIONAL EXPERIENCE

Data Scientist, Elevance Health

Jan 2025 - Present | GA, US

- Led end-to-end machine learning model deployment using Python and Rust, improving prediction accuracy by 15% and demonstrating strong ownership in production environments.
- Engineered predictive modeling pipelines with SQL and feature engineering, autonomously managing data preparation and model training for over one million records monthly.
- Implemented model benchmarking and monitoring using PySpark and AWS, reducing model degradation by 25% through proactive evaluation and problem solving.
- Deployed containerized models with AWS and Docker in CI/CD pipelines, ensuring individual responsibility for reliable releases and reducing deployment time by 30%.
- Developed scalable REST APIs with FastAPI and Kubernetes, leading cross-functional teams to deliver low-latency inference services supporting thousands of daily requests.
- Developed scalable GraphQL APIs with FastAPI, Kubernetes, and Typescript, leading cross-functional teams to deliver low-latency inference services supporting thousands of requests daily.
- Collaborated on full-stack software engineering with Rust, Typescript, and Postgres to integrate machine learning models into production environments with high engineering standards.
- Owned model lifecycle from research to production, emphasizing rigorous evaluation, benchmarking, and monitoring to deliver high-quality predictive models in a high-autonomy environment.

Senior Data Analyst, T. Rowe Price

Jun 2023 - Dec 2024 | MD, US

- Optimized SQL queries and Power BI dashboards using Python, reducing runtime by 35% and demonstrating ownership of data pipelines and performance.
- Constructed predictive modeling pipelines in R with rigorous model evaluation and benchmarking, autonomously driving initiatives that improved customer retention insights.
- Designed machine learning forecasting workflows leveraging Alteryx, contributing to model training and evaluation that accelerated monthly forecast cycles by 20%.
- Monitored model performance and data drift using MLflow and SQL, leading quality reviews that upheld rigorous model monitoring and evaluation standards.
- Automated data workflows and Tableau report refreshes using Power Automate and Python, enhancing asynchronous collaboration and reducing manual effort by 40%.
- Facilitated cross-team collaboration by integrating GraphQL APIs with PostgreSQL-backed Looker dashboards, enabling user-driven design of new analytical concepts.
- Enhanced feature engineering processes using Gradient Boosting and XGBoost, delivering higher-accuracy predictive models and driving team capabilities.

Data Analyst, Citizens Bank

May 2021 - Jun 2022 | TG, IN

- Developed over 30 SQL reports and interactive Tableau dashboards with Python automation, reducing report-generation time by 40% while demonstrating ownership in fast-paced settings.
- Built ETL pipelines using Spark and Hadoop to process large-scale transactional data, solving data integration challenges and supporting predictive modeling data needs.
- Executed autonomous data validation workflows using Python and Power BI, ensuring data integrity that supported reliable model evaluation and business decisions.

- Streamlined SQL-based reporting and automated workflows with Alteryx and Power Automate, accelerating delivery cadence and enhancing communication between data and operational teams.

EDUCATION

Master of Science in Management Information Systems(CGPA: 3.3)

SUNY Binghamton University

Aug 2022 - May 2024 | NY, US
